Structure

Structure formed by 2 feet with arch form and 2 crosspieces acting as a frame. All the elements are welded with a continuous TIG bead, allowing a high mechanical resistance. The steel tube has a section of 35mm diameter and the 4 base points in contact with the floor are protected by black plastic blocks.

Table top

It is constructed by a steel sheet of 2 mm and cut by laser. It is screwed by 4 M8x50 screws to M8 nuts welded on the table top.

4 plastic injection pieces located below the table allow the exact height and the protection and distance for stacking the tables.

PACKAGING, WEIGHT AND VOLUME

Table (1 unit)

Weight: 15.5 kg

Box dimensions: 69x69x74 cm

All packaging is made of double cardboard box, 100% recyclable.
